The Futura Basic™ System

The Futura Basic System features compact, sturdy and functional stands, available in either painted or stainless steel. The Futura Basic units are offered only with direct drive pumps. The space-saving design is 54"H x 18"D x 22"W. The system includes overhead hinged electrical enclosure; stainless steel; adjustable soap and wax solenoids; float tank feed system; bypass regulator; pop-off pressure relief; dampening hose; and is factory pre-wired and plumbed. The hinged enclosure houses all motor protectors, contactors and transformers. The Futura Basic system offers a choice of General (Interpump) or Cat plunger pumps.

The Futura Basic System was developed for discriminating operators who know their needs and require only the essentials. Specialty developed the Futura Basic line in response to your requests for simple, reliable, compact systems - just like the old days. Futura Basic systems include the same quality components, reliability and ease of service associated with other products offered by Specialty Equipment Company.

**Horizon Mid
Flow Spot Free**

**You Can
Design
A BASIC
System To
Meet Your
Needs.**

- The Futura Basic Detergent and Wax Dispenser includes a 100% stainless steel, 2-compartment wall-mounted tank with auto proportioners for the soap and wax.
- The Futura Basic Low Pressure System is wall mounted and includes your choice of stainless steel or polyethylene stands and chemical tanks. All systems include tank-mounted Flojet air pumps, each capable of serving up to six bays. The Futura Basic Low Pressure Systems are available in single or triple product configurations and include all in-bay accessories. NOTE: All low-pressure options require separate compressed air feed and a feature decal on the coin meter in the bay.
- The Futura Basic Rainbow Triple Color System is available for either foaming brush or clear coat applications. Similar in design to the Futura Basic Low Pressure Systems, it uses the triple product stand with a special electronic switching system to deliver continuous, multi-colored product to the bay.
- The Futura Horizon Spot Free Rinse System is available with any Futura Basic System. The Horizon series is available with mid or high flow delivery systems that lend a feel unlike any other your customer has experienced! The Horizon series features integrated construction with the make-water and repressurization system on the same rugged, space-saving stand. Every Horizon system includes Specialty's exclusive, stainless steel delivery manifold. Like other products included in the Futura Basic Line, the Horizon is available in either painted or stainless steel construction. The Futura Basic System is ETL listed.
