MagneLift™

Air-Powered Door Operators

Horizontal Mount

Ideal for Standard lift or Highlift Applications

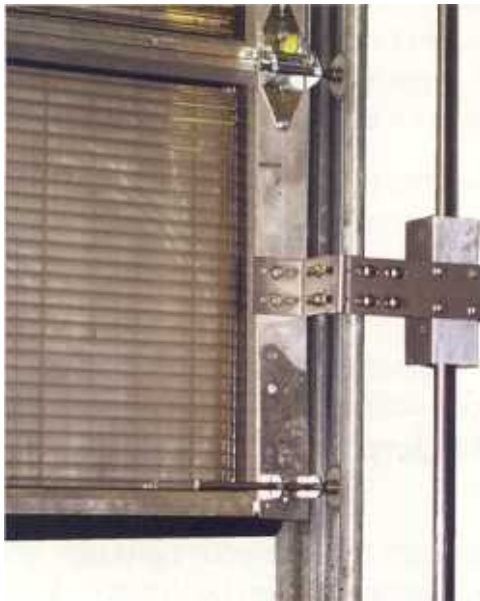

For standard lift doors, install the MagneLift™ in a horizontal drawbar position with direct attachment to the top section. Operator is positioned in a warmer, drier and well-protected area. Can be used with dummy section on highlift doors.

Features

- Connects Directly to Top Section
- Stainless Steel Hardware
- Protected from Direct Spray
- Adjustable Stainless Steel Arm Assembly
- Exhaust Only- **No Moisture Intake!**
- No Cable, Belts, Chain or Sprockets
- No External Seals for Zero Leakage

Vertical Mount

Ideal for Vertical or Highlift Applications

For highlift doors, install the MagneLift™ alongside the door track and connect directly to your door's bottom section. Fully adjustable stainless steel mounting brackets gives you the versatility to meet a multitude of installation situations.

Features

- Connects Directly to Bottom Section
- Adjustable Stainless Steel Mounting Hardware
- Stainless Steel Multi-Motion Door Connection
- Exhaust Only- **No Moisture Intake!**
- No External Seals for Zero Leakage
- No Cable, Belts, Chain or Sprockets

- **Fast, Safe Operation**
- **Corrosion Resistant**
- **Horizontal or Vertical Mount**
- **Easy To Install**
- **Extended Life**
- **3-Year Unlimited Warranty**
- **Economical**

Designed Specifically for Your Wet, Corrosive and High Use Environment...

Designed with your environment in mind, MagneLift™ Air-Powered Door Operators are ideal for applications where dependability, reliability and durability are absolutely critical for a profitable and trouble-free operation.

Utilizing an innovative compressed air and rare-earth magnetic design, MagneLift™ Operators feature a heavy duty, rust-proof, tubular stainless steel cylinder with no mechanical connection between the piston and the piston slide. This advanced magnetically-coupled design eliminates the need for external seals and fewer wear components, providing you with less maintenance and leak-proof operation.

For cold weather climates, MagneLift™ "exhaust only" configuration ensures less probability of moisture intake and freeze-ups giving you the confidence of reliability in any season.

MagneLift™ Operators conveniently connect directly to your door virtually eliminating costly down-time due to cable jumping common with jackshaft style openers.

Versatile enough to meet your particular door systems needs, MagneLift™ can be installed horizontally or vertically to fit your standard or custom requirements.
