

**Put More Profits in
Your Pocket – Period!**

Dollar for Dollar, We Deliver Incredible Profit Power!

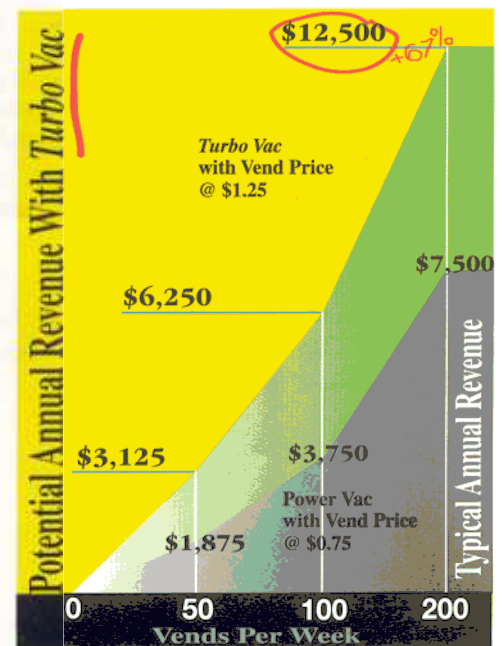

Model #520000

Mega Vac has two powerful vac service selections— “Power Vac” and “Turbo Vac.” Your customers can choose either power setting before or at any time during the vend cycle.

You can set the “Power Vac” service mode at the local market price and attack the competition with this unit’s great looks and customer appeal. Then watch as your customers enthusiastically switch the operating mode to **Turbo** — at premium prices — to tackle their toughest cleaning jobs.

Your loyal customers will rave about Mega Vac’s unbeatable Turbo cleaning performance.

Mega Vac provides the service your customers will come back to use time after time — at prices that will put a huge boost in your business! Just look at the profit potential as illustrated in the chart below.

INDUSTRIAL VACUUM SYSTEMS, INC.

Multi-Power Vac #520000

Vacuum Specifications (standard equipment):

Air Flow — POWER VAC MODE: 150 ft³/min., 84" suction (water) lift.

Air Flow — TURBO VAC MODE: 205 ft³/min, 84" suction (water) lift.

Motors — Three Lamb® Electric, 1 HP (max.) each, bypass cooled, 7 AMPS per motor

Filters — Four bag system uses high performance napped synthetic filtration material with 15 sq.ft. effective filtration area. Accessible through easy-access filter service doors.

General Specifications:

Coin Mechanism — Electronic type, metal construction accepts up to 1 inch diameter coins per sample.

"Intelligent" Display and Dual Timer — Our "exclusive" dual timer individually controls each service during one cycle for vend price and time from 2 seconds to 8.5 minutes per coin. The large LED display shows vend price for each service and is synchronized with the vend selector switch. Accumulates 1 to 15 coins and displays the balance required to start cycle. LED display defaults to a custom message when Fresh'N Up is not in use. Toggle switches actuate real time recalculation of cycle time remaining. Timer sounds an audible signal at completion of cycle and scrolls an invitation to purchase more time on a "per coin" basis. If no further service is used, the display scrolls a custom "Thank You" message before resetting to the default "Welcome" message. A built-in tamper-activated alarm can be connected to premises alarm system. Eight port data acquisition and storage with I/O port for download. Solid-state type controller with high capacity output switch. Overload protection isolates loads and transients from control circuits.

304 Grade Stainless Steel Tank and Vault — Tank: 16 gauge, brushed finish, size 18.5"(Diameter) x 48"(High). Main Cabinet Enclosure: 16 gauge, brushed finish. Main Cabinet Service Door: 12 gauge brushed finish with three high security cylinder locks. Coin Vault: 12 gauge stainless steel with internal lock and layered security cover.

Electrical — 120 VAC, 30 Amp. Easy service access.

Secure Mounting — Two internal mounting lugs for secure installation. External lugs(2) have security collars. Uses 3/8" bolts.

Unit Dimensions — 61"(High) x 22"(Wide) x 27"(Deep)

Tank Dimensions — 18.5"(Diameter) x 48"(High)

Unit Weight— Net 225 lbs., with shipper = 250 lbs. Ships in carton/pallet: 67"(High) x 32"(Wide) x 31"(Deep).

INCREDIBLY POWERFUL

Look At These Very Special Features

Outstanding Customer Service — Mega Vac customers can choose from super vacuum power or switch to higher TURBO POWER during vacuuming cycle.

The higher power vacuum option "sells" the Mega Vac-level of performance and boosts your business through higher vend rates and increased customer loyalty.

Exclusive Dual Timer — Controls Two Cleaning Options At Once: This incredible timer, with LED display, actually lets customers use two vac services during one cycle. It gives them great value and gives you tremendous profit potential.

Keeps customers well informed — Mega Vac displays your custom message welcoming customers to your car wash. It also shows your vend prices and invites the user to try the incredibly powerful TURBO VAC service.

The timer's LED display totals the value of the coins as they are deposited. When the total start price value is deposited, the display begins to count down the time remaining in minutes and seconds. During this time, customers can switch between services (regular Power Vac mode and higher power TURBO VAC mode) and the display instantly recalculates the correct time remaining using the price and time values you preset.

When remaining time reaches the last minute of service, the unit signals the customer with an audible alarm and displays a message— INSERT ADDITIONAL COINS FOR MORE TIME. The LED continues with the time remaining count down.

The option to purchase more time is available for the last minute of service and extends for an additional 15 seconds beyond the finish of the vend cycle. The audible signal continues during this time and message.

After the cycle and extra time period have elapsed, the unit displays a THANK YOU message which is customizable and can include your business name.

Our timer includes data storage, data ports, and alarm capabilities—built in.
